Miracle on the Hudson

The story of US Airways Flight 1549

On January 15th, 2009, the world witnessed the 'Miracle on the Hudson,' when US Airways Flight 1549 made an emergency water landing on the Hudson River after flying into a flock of Canada geese which took out both engines during take-off from LaGuardia airport in New York.

At roughly a hundred seconds into the flight, passengers could hear a 'colossal bam' when the birds were sucked into the engines and flames could be seen coming from the

left engine. They didn't know then that not one, but both engines had gone. However, in an extraordinary display of aviation skill, Captain Chesley 'Sully' Sullenberger safely managed to glide his disabled plane onto the freezing waters of the Hudson River, saving every life on board.

Sully's forced-landing on the Hudson was indeed miraculous. To get the water landing right and not end in disaster, Captain Sully had to bring the 66-ton Airbus A320 down at the perfect speed and angle. But even then, the passengers feared they might drown after surviving the water landing. Either that or die from hypothermia. This didn't happen, though, and as Captain Sully walked the plane twice to make sure all the passengers had got out safely, all 155 survivors scrambled onto the wings and the emergency inflatable exit ramps, and waited to be rescued by the NYC ferry boats that quickly came to the aid of the sinking plane.

The story of the miracle on the Hudson River is now told in the brilliant film *Sully: Miracle on the Hudson*, directed by Clint Eastwood and starring Tom Hanks. Only this time, the film explores a different side of the story, revealing what life was like for the now retired pilot in what he calls the traumatic months following the events. Because, even as Sully was being heralded as a hero by the public and the media for his unprecedented feat of aviation skill, an investigation was being conducted by the Federal Aviation Administration (FAA) that threatened to destroy his reputation and his career.

As part of their investigations nearly two dozen emergency simulations were flown at the Airbus headquarters in Toulouse, France, in which pilots consistently managed to return to the closest LaGuardia airport. As a result, Sully was faced with harsh criticism from the National Transportation Safety Board, who accused him of putting passengers in more danger than necessary.

However, in the simulations the decision to turn back was made immediately after the engines blew. The simulated scenarios didn't account for the "human factor", essentially the 30 seconds it took the pilot to decide what to do. There could be no guarantee that the passengers' jet could have made it back to LaGuardia airport. 'I had to be certain we could make it,' Sully wrote in his statement to the safety board. 'Who knows how many more people besides the ones on the plane would have been killed on the ground if we didn't.'

In the end, after examining whether Sully could have safely turned back to New York's LaGuardia Airport, the safety board determined the captain's split-second decision to force landing on the Hudson River was the most appropriate action.

1. How were the two engines damaged?

2. What potential risks did passengers face after the emergency landing?

3. Why was Sully's decision to land on the river criticized by the safety board?

4. What crucial variable didn't the FAA investigation consider at first?

5. How did Captain Sully explain his decision to land on the Hudson River?
